

Monte Carlo Temperature Scaling (MCTS) — Full Analysis

Toy example: 3-class MLP, class 1 ambiguous ($\hat{\pi} = [0, 0.7, 0.3]$)

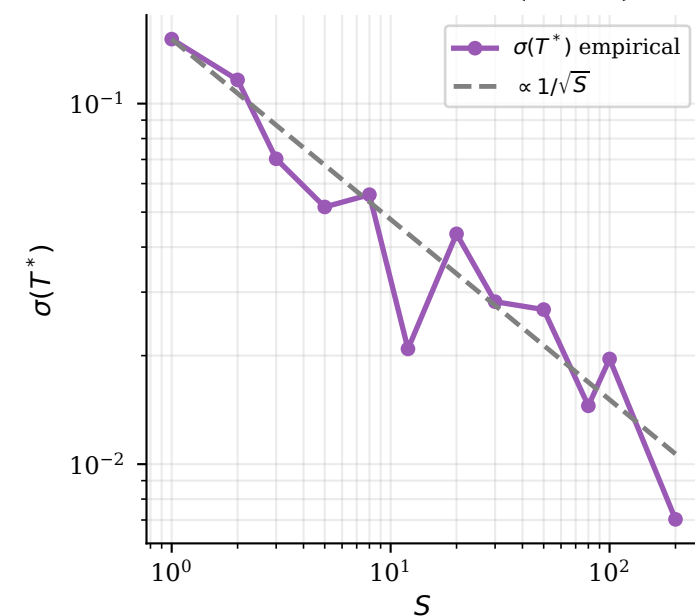

ECE-Soft vs. S

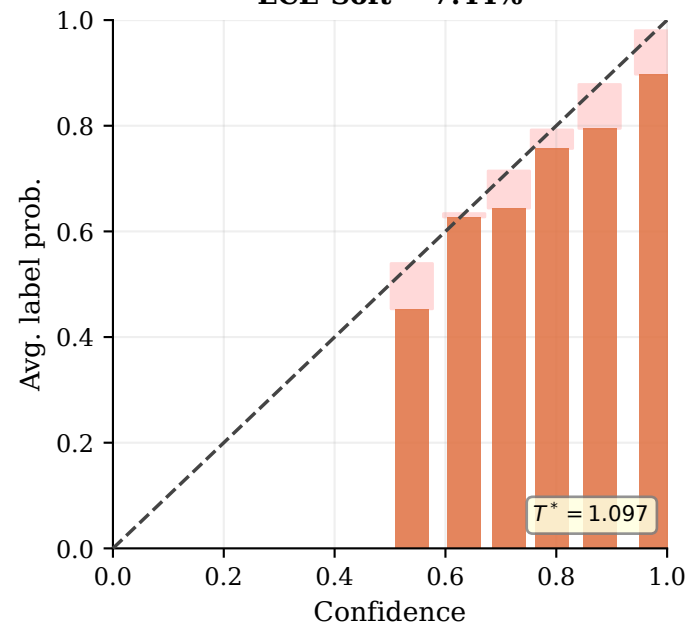

Temperature T^* vs. S

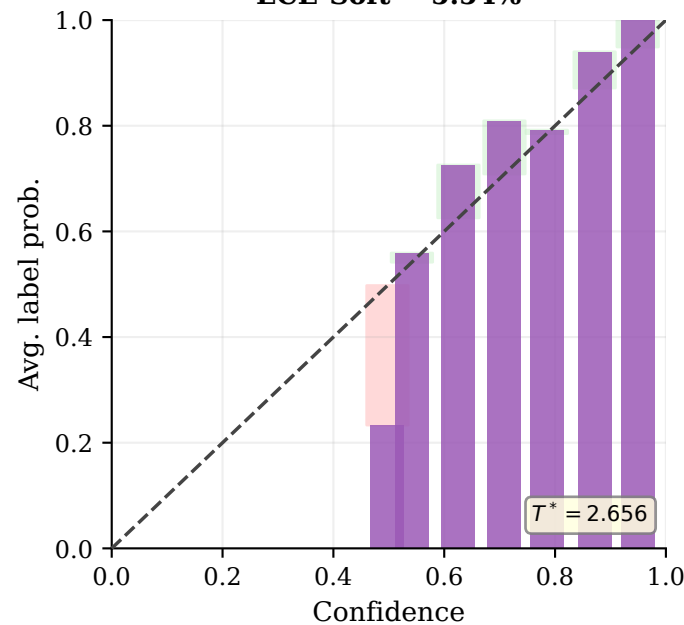

Variance Reduction ($\propto 1/\sqrt{S}$)

TS (hard labels)
ECE-Soft = 7.44%

MCTS $S=5$
ECE-Soft = 5.54%

MCTS ($S=50$)
ECE-Soft = 5.20%
